Mission

Design, develop and integrate technology which optimize and boost our client's financials, ensuring the best experience for the final users.

Vision

In 2028, Vatlatam will have solutions display in 5 national territories in Latam for airports, ports and land terminals.

Management platform for intelligent mobility:

Our fully integrated platform for intelligent mobility is an advance technological solution which transform individual, collective and massive transportation for urban and interurban territories. Using the latest software and hardware available, we track, capture, transfer and analyze real time data for predictive and immediate decisions.

Focus on digital transformation and smart territories, our platform allows our clients to improve its operational efficiency, optimize routes, manage and control vehicle fleet and enhance the user's experience. We implement personalize and modular solutions which are able to meet the specific needs for each client, giving a solid base for strategic decision making.

Our portfolio

Control centers:

We design, implement and operate control centers with the highest standards for airports, ports and land terminals. These centers are equipped with cutting-edge technology, including artificial intelligence and big data; to centralize and manage operational and administrative processes.

Our experts supervise real time operations, allowing a rapid response to the operational challenges presented and a quick display of preventive actions. Our control systems are designed to suggest specific and tactical recommendations, enhancing continuously the operational security and efficiency.

Our portfolio

Commercial tracking systems:

We develop advance systems for tracking passenger flow and retail behavior. We use hardware and software specialize for management and control of commercial income. These systems provide real time measurements about commercial transactions, allowing a particular supervision about the financial behavior of retail.

Our systems count with prediction capability, allowing authorities and commercial operators to take informed decisions to optimize its offering and maximize revenue.

Our portfolio

Operational systems:

We integrate operational systems for control and management of airports, ports and land terminals. Via our strategic alliances with global leaders in this type of solutions, we adapt the modular and scalable offering to the specific needs of each cliente. We integrate resources management system, baggage management system, terminal operation system, user information system and marketplace.
